NAME: ANJALI PANDEY

REGISTRATION NO.: 25BAI10296

BRANCH: BTECH CSE(AI&ML)

YEAR: 1ST YEAR

COURSE CODE: CSE0001

DATE: 27-03-2026

INTRODUCTION

In today's world, digital skills have become very important for students. This project is based on digital literacy and gives me the role of a Student Digital Ambassador. In this role, I learned how to guide others in using digital tools properly, maintaining a professional online presence, and staying safe while using the internet. The project helps in understanding how technology can be used in a responsible and effective way in daily life.

This project is divided into five tasks, each focusing on a different area of digital literacy. These include creating an infographic to spread awareness, building profiles on platforms like GitHub and LinkedIn, exploring coding and collaboration tools, writing professional emails, and learning about cybercrime and online safety. Each task gave me practical experience and helped me understand how these tools are used in real situations.

While working on this project, I got the chance to use tools like Canva and Google Forms, and also explore new platforms. It improved my confidence in using digital platforms and taught me the importance of clear communication and online safety. Overall, this project was a valuable learning experience that will help me in my academic journey as well as in my future career.

Task 1 – Digital Literacy Awareness Infographic

In this task, I created a digital literacy awareness infographic using Canva. The main aim was to explain what digital literacy means and why it is important for students like us. I tried to keep the design simple, clear, and visually attractive so that anyone can easily understand the message. I included important points such as useful digital tools, safe internet practices, and the importance of maintaining a professional online presence.

While designing the infographic, I explored different templates, colors, icons, and layouts available on Canva. It was interesting to see how visual elements can make information more engaging and easier to understand. I focused on organizing the content properly so that it does not look too crowded and each point is clearly visible. This helped me understand the importance of visual communication.

One challenge I faced was fitting all the important information into a single page without making it look messy. It took some time to adjust the design and content properly. However, this task helped me improve my creativity and presentation skills.

Overall, it was a great learning experience, and I enjoyed creating something informative and visually appealing.

Task 2 – Build Your Student Digital Portfolio

In this task, I created and updated my profiles on three important platforms: GitHub, LinkedIn, and Kaggle to start building my digital portfolio. These platforms are widely used by students and professionals to showcase their skills, projects, and learning progress. On GitHub, I created my profile and added a README file that includes my basic details and what I aim to learn during my course. On LinkedIn, I completed my education section and began developing a professional profile that can be useful for future opportunities. I also created an account on Kaggle to explore datasets and learn more about data analysis and problem-solving.

Each of these platforms serves a different purpose. GitHub is mainly used for sharing projects and collaborating with others, LinkedIn helps in building professional connections and networking, and Kaggle is useful for practicing data science skills and participating in competitions. Working on these platforms helped me understand the importance of having a strong digital presence.

In the future, I plan to stay active on these platforms by regularly updating my profiles, uploading projects, and learning new skills. This will help me grow academically and prepare for internships and career opportunities.

Task 3 – Explore Coding & Collaboration Platforms

In this task, I explored both a coding platform and a collaboration tool to improve my practical and technical skills. For coding practice, I used HackerRank, where I created an account and completed a beginner-level challenge. This activity helped me understand how coding problems are presented and how to think logically to solve them. It was a useful experience as it gave me confidence to start practicing programming regularly and improve my problem-solving abilities step by step.

For the collaboration part, I used Google Forms to create a Digital Literacy Awareness Quiz. I designed a form with five questions, including both multiplechoice and short-answer types, to check basic knowledge about digital literacy among students. I also explored the response section, where the answers were automatically collected and displayed in Google Sheets. This helped me understand how data can be managed and analyzed easily using online tools.

Overall, this task was very helpful in introducing me to platforms that support both learning and collaboration. It improved my technical understanding and showed me how these tools can be useful in academics. In the future, I plan to continue practicing coding and use such tools for group work and projects.

Task 4 – Email Etiquette & Professional Communication

In this task, I learned the importance of professional communication through a common real-life scenario. A problem can occur when a student sends an email to a professor in an informal way, without a proper subject line or clear explanation. For example, requesting an assignment extension casually without giving a valid reason may lead to misunderstanding or the request being ignored.

To understand this better, I wrote two professional emails—one requesting an assignment extension and another applying for a summer internship. While writing these emails, I focused on maintaining a clear structure, polite tone, and proper format. I also created a social media Do's and Don'ts checklist to promote responsible online behavior among students.

From this task, I learned key communication skills such as writing clear subject lines, using respectful language, and organizing content properly. These learnings will help me avoid mistakes and communicate effectively in both academic and professional situations in the future.

Task 5 – Cybercrime Awareness: Case Study & Prevention

In this task, I explored cybercrime awareness by studying a case of UPI fraud and understanding how such attacks happen. What surprised me the most was how easily people can be tricked through simple methods like fake calls, links, or QR codes. Many users are not aware that sharing an OTP or entering a UPI PIN can lead to immediate financial loss.

I also created a “Stay Safe Online” checklist to promote awareness among students. It included important points like never sharing OTP or UPI PIN, avoiding unknown links, using strong passwords, enabling two-factor authentication, and not using public Wi-Fi for transactions. I also added financial safety tips such as not scanning unknown QR codes and never entering a PIN to receive money.

From this task, I learned the importance of being alert while using digital platforms. One habit I will personally change is being more careful with unknown messages and links. This task helped me understand how small precautions can prevent major cybercrimes.

Conclusion

This project helped me understand the importance of digital literacy in today's digital world. By working through different tasks, I learned how to use various online tools effectively and responsibly. It also gave me a clear idea of how technology plays an important role in our academic and professional lives.

Through this project, I improved my skills in creating content, building a digital portfolio, and communicating professionally through emails. I also gained awareness about cybercrimes and learned how to stay safe while using digital platforms. Each task provided practical knowledge and helped me develop confidence.

Overall, this project was a great learning experience. It not only enhanced my technical and communication skills but also taught me the importance of responsible digital behavior, which will be useful in my future studies and career.
